

SPENCER FLETCHER

US Citizen ♦ +1 (351)-209-8432 ♦ spencer@spencerfletcher.com ♦ spencerfletcher.com ♦ [LinkedIn](#)

UBC computer science graduate (3.9 major GPA) with experience in low-latency distributed systems (Python, AWS), compiler tooling (C++, Clang/LLVM) and full-stack web development (TypeScript, SvelteKit, PostgreSQL).

EDUCATION

University of British Columbia, Computer Science, GPA 3.85/4.0 (Major GPA 3.9) Aug 2022 - May 2026
Outstanding International Student (OIS) Award

University of Rochester, Computer Science, GPA 3.8/4.0 (Major GPA 4.0), Dean's List Sep 2021 - May 2022

SELECTED PROJECTS

Cross-Venue Trading Engine | github.com/spencerfletcher/market-maker Mar 2026 - Present

- Built a trading engine that detects price gaps on the same bet across Kalshi and Polymarket, using concurrent WebSocket feeds with a detect-verify-fire pipeline and automatic rollback on failure. Cut round-trip latency from 74ms to 14ms via connection pooling and in-region AWS deployment.
- Wrote a falsification harness that REST-verifies each detected edge against the live orderbook; found 69% of detected arbitrage was stale-feed artifacts and retired the strategy without deploying capital.
- Pivoted infrastructure to an automated market maker running live capital on AWS; processed \$42k in notional volume across 52k filled contracts with a 50.6% fill rate.

Fork – Git-Style Recipe Platform | github.com/spencerfletcher/Fork Oct 2025 - Present

- Created a full-stack recipe platform with SvelteKit and PostgreSQL featuring git-style version control (versioning, diffing, forking) for collaborative recipe development, deployed on Netlify.
- Engineered end-to-end and component tests using Playwright and Vitest, with auth and storage via Supabase.

MemoryGuard | github.com/spencerfletcher/MemoryGuard Mar 2024

- Designed a Clang/LLVM tool detecting memory leaks and use-after-free in C, instrumenting at the AST level and tracking heap state at runtime to report findings with exact source locations.
- Implemented pointer alias tracking over a runtime shadow memory map, catching use-after-free through multi-level aliases that escape simple free-site checks.

WORK EXPERIENCE

Bar Manager | Just Another Cafe - Vancouver, BC Oct 2025 - Present

- Overhauled the bar's cocktail, wine, and food program, driving a 30% increase in dinner revenue.
- Manage a team of 15 staff, overseeing daily operations, vendor relationships, menu design, and inventory.

Freelance Developer | Hollywood Theatre - Vancouver, BC Mar 2024 - Apr 2025

- Engineered Google Apps Script tip-splitting tool, saving ~5 hours of manual work weekly.
- Created a JS string-comparison tool for marquee letter tracking, saving ~2 hours weekly.

Student Developer & IT Intern | University of British Columbia - Vancouver, BC Sep 2022 - Apr 2023

- Rebuilt Cadaver Donation platform via WordPress/JS, driving a >100% YoY increase in donations.
- Reduced Linux server downtime by 20% using automated Bash cron backups and log triage.

SKILLS

Programming: C, C++, Python, TypeScript, JavaScript, Assembly, Erlang, R

Web/Frameworks: React/React Native, Next.js, SvelteKit, Node.js, Django, Tailwind

Tools: Git, PostgreSQL, Claude Code, AWS, Docker, CI/CD, Supabase, Playwright, Vitest, pytest, Netlify
